

Top 10 Uses of Multimedia in Different Fields With Examples | Applications of Multimedia

In today's world, we use different technologies on daily basis.

The world is considered a global village now where every person living in one part of the world is connected to every other person around the globe.

With the help of the internet and the latest application with social networking websites like Facebook, WhatsApp, Instagram, etc.

We have the connectivity and the necessary information about what is happening around our planet.

These technologies have helped us with video calling, video sharing, image sharing, and data sharing from one location to another within just a few clicks.

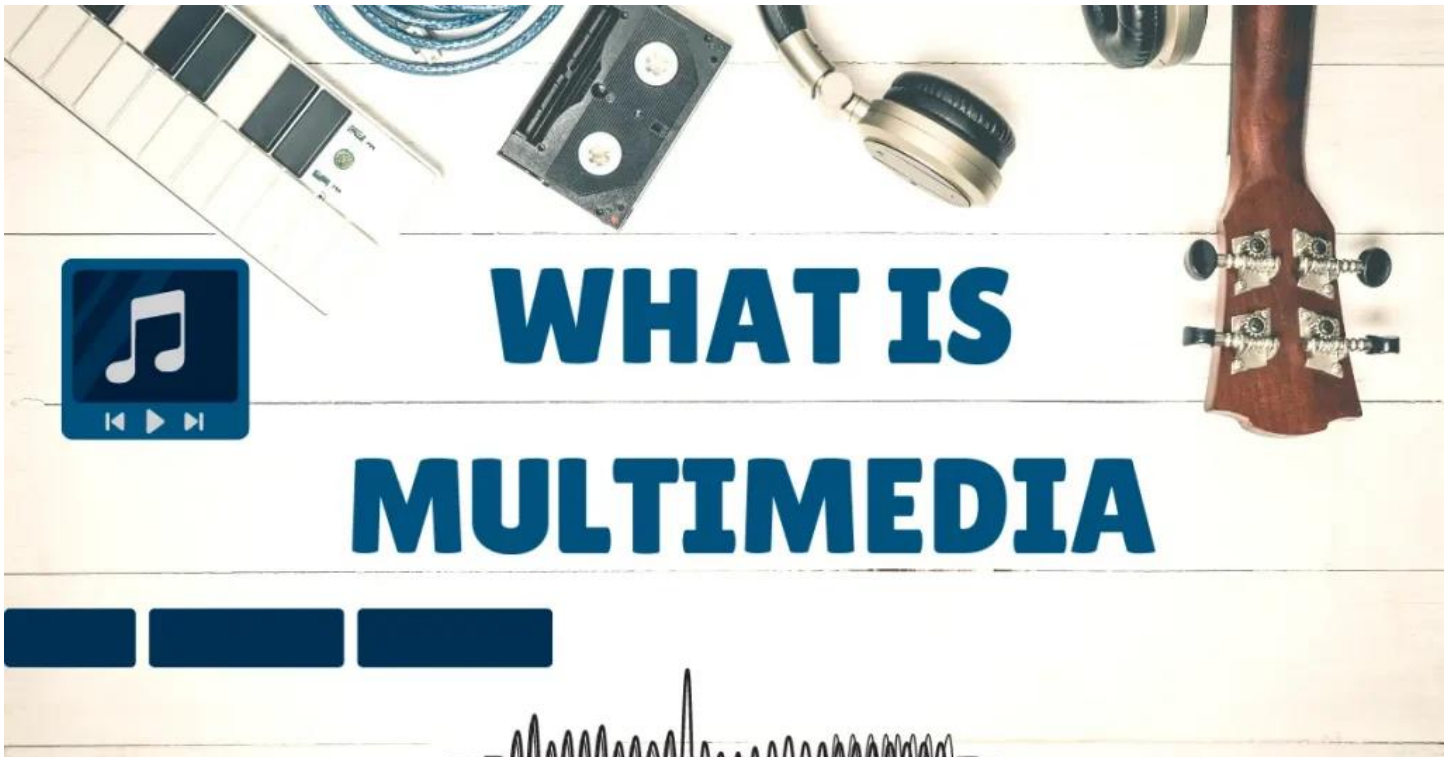

These new technologies have changed the entire living style of human beings and because of the **importance of multimedia in different fields**, they have easily replaced old fashion communication technologies.

In this article, I am going to discuss on 10 Uses of Multimedia in Different Fields with Examples and Pictures as well as the Applications of Multimedia in Various Fields.

What is Multimedia?

The word Multimedia is a formation of two words multi and media. Where multi can be associated with "many" and media can be known as videos, images, graphics, sound, drawing and animations.

So in simple words, multimedia can be defined as the computer information which is used for communication that integrates images, audio, videos, infographics, animations, GIFs, sound, and drawing for interactions and presentations for better understanding.

WHAT IS MULTIMEDIA

This multimedia information can be used in the majority of sectors like business, schools, colleges, universities, small and large organizations, government, and private sectors.

Multimedia is a form of computer information that can be transferred from one location to another in the form of digital information.

Let us try to understand multimedia with an example.

Imagine a group of employees of a company having to create a presentation on how the new product of their organization is beneficial for their audience in 2023.

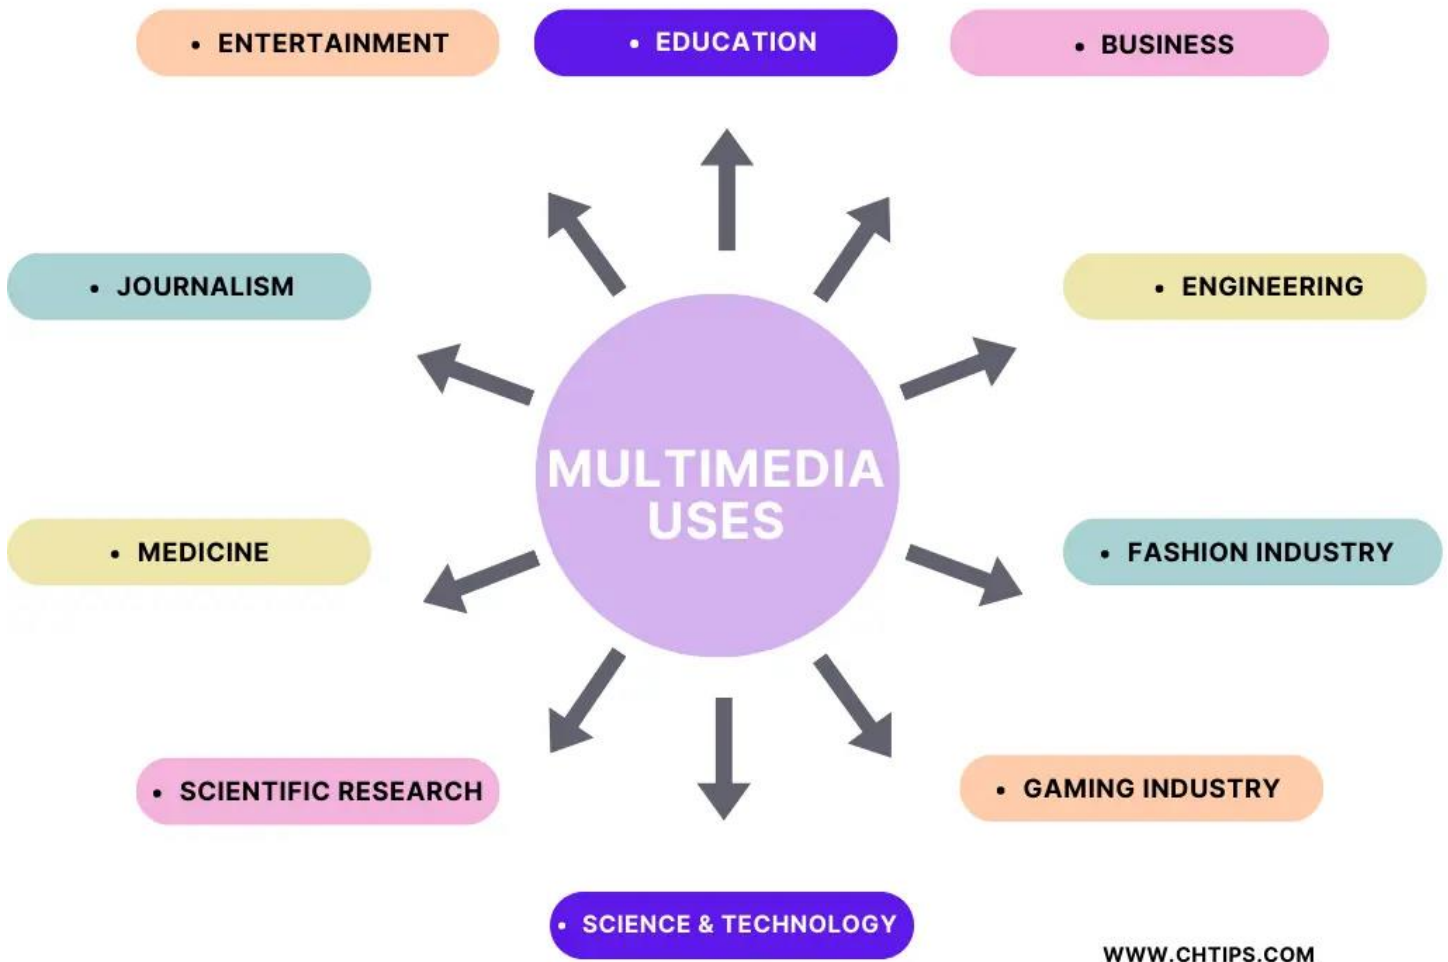

For this, they will require current data which can be in the form of text and images.

To make the presentation more attractive and appealing for the audience they would definitely add some audio and video files for better interaction and for better understanding.

10 Uses of Multimedia in Different Fields | Application of Multimedia in Various Fields
